

## CONSORTIUM HYDIS

"The European Hypersonic Defence Interceptor System" (HYDIS) is a project co-funded by the European Union, under the European Defence Fund, and by four Participating States (PSs) which are France, Germany, Italy and the Netherlands. OCCAR has been entrusted by the European Commission (EC) for the indirect management of the action by the signature of a Contribution Agreement. OCCAR, as Contracting Authority, has concluded a contract with the HYDIS consortium to implement the programme, on behalf of EU and the Member States.

Co-funded by  
the European Union

### Objectives:

- Develop and promote the European Defence Technological and Industrial Base (EDTIB).
- Develop an advanced endo-atmospheric interceptor concept to protect against current and future hypersonic & ballistic threats.

### HYDIS, the capability implementation for TWISTER (PESCO):

- Enhancing European defence capabilities through collaborative technologies development.

### Mission:

- Safeguard populations and armed forces against challenging threats.
